Pattern, Proportion, and Reptition

**Pattern** is the repeating of an object or symbol throughout the artwork creates a pattern, which could be organized or random.

**Exploration Challenge:** Create your own pattern using shapes or a household object.

**Proportion** is represented when all of the part of an artwork (size, amount, and location) fit well together. This principle is important when creating living figures in a piece of art.

**Exploration Challenge:** Pick two animals and create a piece of art showing them in proportion to each other.

**Repetition** works with pattern to make the artwork seem active. Good repetition of elements can create harmony in a piece.

**Exploration Challenge:** Using a pencil only, create a picture using the principle of repetition.
